RESUMEN

En el presente trabajo se consideran las principales especies arbóreas y arbustivas indígenas de la zona denominada Parque Municipal "Las Piedras", cercana a la ciudad de Paraná.

En la primera parte se ubica la zona estudiada dentro de las regiones fitogeográficas correspondientes al esquema de Cabrera, 1953 y en la segunda parte se clasifican las especies características de la misma. Los ejemplares que han sido clasificados se acompañan de dibujos tomados directamente del natural.
